2026 in W.D. Gann's "Financial Time Table"

W.D. Gann's Financial Time Table from 1784 to 2008 is based on the 18.612958-year lunar nodal cycle (6,798.383 days, the time for the Moon's north node, also referred to as the True Node, to complete one orbit relative to the ecliptic). Compiling his Financial Time Table in 1909, however, Gann approximated the lunar node's period without an ephemeris by simply alternating 18- and 19-year intervals to achieve an average of 18.5 years—an error of 47.33 days per cycle, meaning Gann's cycle is lagging behind the node's true position.

FINANCIAL TIME TABLE

► "W. D. Gann" and "Louise McWhirter" share the same numerological root of "9". ◀

Regardless, even though the extended version of the original table into 2121 did not correct Gann's error, it forecasted a market panic in 2020 (accurate), and high stock prices in 2022–2023 (accurate?). For 2024, 2025, and **2026**, Gann's table warns about a "major panic CRASH! 4 years of falling prices, business stagnated, breadlines, soup kitchens, despair, unemployment." Correct? For 2027 to 2031, the table announces "extreme low stock prices, strikes, repression, [and] despair" to be followed by the "beginning of [a] new business generation of 18.6 years. 4 years of rising stock prices and improving business. Markets bare of goods. Young men becoming prominent." Time will tell.

Gann claimed his time table accurately forecasted over a century of significant events, including the 1907 Panic, the **1929** Crash, and the post-World War II boom. This framework has shown continued relevance in modern validations, such as the 2020 COVID-19 market panic, which aligned with a projected low year in the table. Furthermore, the 2022–2023 stock highs preceded an anticipated downturn, also fitting the established pattern.

► Major crash in 2024–2026 with prolonged economic stagnation, and a recovery by 2028–2030. ◀
W.D. Gann's original "Financial Time Table" adjusted and extended into 2121.

While appealing, the table's predictions should be approached cautiously, considering external factors and the debated accuracy of Gann's methods.

► Maybe Gann's table should be shifted for a few months in view of 18.5M approximation vs 18.6M desired value. ◀
Branimir Vojcic, 2025.

Branimir Vojcic is right: For higher degrees of conviction, diehard Gann aficionados may want to re-anchor the exact lunar nodal period to a specific date (e.g., sign ingress, natal chart, crash low), and derive further clues from "Louise McWhirter."

A Case for Recession or Depression Between 2025 and 2028

I recently published a companion article regarding the next iteration of the 54-year War and Revolution cycle which interestingly is centered on July 4th, 2025.

In conjunction with that event, I want to bring to light an additional cycle of potentially great negative significance as well, which occurs within the same time frame between 2025 and 2028.

It is not a matter of whether the above events will occur, it is simply a matter of their ultimate severity.

At the core of this proposition and one of the first complete expositions regarding an astronomically based theory of business and economic cycles, was given by Louise McWhirter in her book *McWhirter Theory of Stock Market Forecasting*, published in 1930. Her theory proposed the primary trend of business and economic volumes were due to the 18.6-year cycle of the Moon's Fourth Node as it circumnavigates around the sky.

This 18.6-year North Node cycle is also at the foundation of the 9 (18.6 / 2 = 9.3) and 56 year (18.6 x 3 = 55.8) economic cycles.

» We shall find out soon enough. «
